# Discovery Panel

Judy Drescher ▪ Christian Haenger ▪ Jim Hammons  
Allen Jones ▪ Fen Lu ▪ Randy Oldham

Ball State University - Jim Hammons

- 19,000 FTE
- Symphony: 1998
- 360/Intota: 2009/14
- Summon: 2012
- Alma/SOA: next week

Mannheim University - Christian Haenger

- 13,000 FTE
- Aleph 2008
- Primo 2009
- Alma 2016

Molloy College - Judy Drescher

- 4,500 FTE
- Voyager: 1998
- 360: 2008
- Summon: 2013
- VuFind: 2014

U of Guelph - Randy Oldham

- 23,000 FTE
- 3 university consortia
- Voyager: 1997
- Primo: 2008
- In discussions for a province-wide system

New School - Allen Jones

- 9,661 FTE
- Aleph:2008
- Primo:2008

U of Texas Arlington - Fen Lu

- 41,712 FTE
- Voyager:1998
- Summon:2012
- Intota: 2012
- Alma: 11/2018

# Agenda

Part I 1:30 - 2:15

- Infrastructure, Configuration & Customization

Intermission 15 minutes

Part II 2:30 – 3:15

- Collections, Usability, Analytics & Support

# Questions Part 1

- Why did you choose the discovery service that you did?
- How is Primo/ Summon integrated in the IT infrastructure of your institution?
- What are your experiences with configuring the discovery system?
- To what degree can the interface be customised?

# Question 1

Why did you choose the discovery service that you did?

# Why Primo?

1. Nothing existed in 2008 but Primo
2. Integration with Aleph E-Shelf functions
3. Flexibility in data normalization, data sources and interface flexibility
4. Multi-institutionality / Complex institution configuration
5. Integrated with the SFX/Aleph/MetaLib environment at NYU
6. Customization - root access to filesystem and database

# Why Summon?

- Primo is not a viable option for many institutions that don't have a library IT staff
- In 2013 a more likely choice would be between Summon and EDS - Summon was the more mature product
- A far superior index
- SerialsSolutions 360 suite of services (360 core, link, A-Z)
- In the context of an Alma migration, the familiar UI, and having chosen Summon over Primo years ago. (Ball State)

# Question 2: IT Infrastructure

How is Primo/ Summon integrated in the IT infrastructure of your institution?

# Primo or Summon - Infrastructure

- Primo started as a locally hosted discovery service
- Link Resolver is a separate component
- Primo has a local index of records + remote
- front-end customization has a robust dev environments
- patron enrichment in multiple ILS systems
- Summon has always been cloud-based
- Link Resolver is integrated into Summon
- Summon has a centralized index of records
- Front-End is customized with institutionally hosted angular scripts, CSS
- ILS functionality via Alma only

# Summon - API Only customers

There is also a use-case where institutions use the Summon API, but don't use the interface

- Columbia University
- Michigan State
- Molloy College
- Yale University

They only care about the API, not the interface....

### » **Search Engine Configurations**

Manage the search engine configurations

# Configuration

- A ton of work initially!
  - Norm rules!!!!
  - Testing, testing, testing
  - Consortia causes complexity
  - Discovery layers expose flaws in your bib records
- Recently norm rule to prepend all URLs from 856 in local records with our proxy urls (view-aware)
- Local changes to improve UX and integrate other systems (Ares, custom floor map apps...)

# How the 360 Knowledgebase and Summon Work Together for Discovery

- Summon relies upon the 360 KB to help facilitate rights access to the content that resides within the index
- Rights access is assigned by tracking a particular title by its ISSN or ISBN in 360 KB, or by assigning a Database ID (all or nothing rights)
- Summon utilizes the SSID found within the Authority Records by adding it to any records found within the Summon Index that match based on either the ISSN or ISBN
- The 360 KB also helps Summon indicate when content has full-text availability

source: "Content Ingestion: The Trials and Triumph" by Dave Hovenden - Used with permission

# PrimoVE/Summon Over Alma

- Alma Discovery configuration page
- Most Summon configuration is done in the familiar Summon
  - Admin Console. Exceptions (learned so far):
    - IP range, EZProxy base URL are configured in Alma
    - Require a content publication cycle to become effective
  - Primo VE normalization, etc. in Alma
- Services Page configuration is done in Alma for both
- Nice surprise for Summon: Alma Services Page is also the link resolver landing page

# Normalizing Data - Summon

- Process called "Match & Merge"
- Multiple records, full-text and other metadata along with "value added" info for an item merged into one record
- Various format types update at different intervals
- Relevance of results based on Dynamic & Static ranking

# Summon Match & Merge Rules

## ISSN Match Rule

## ISBN Match Rule

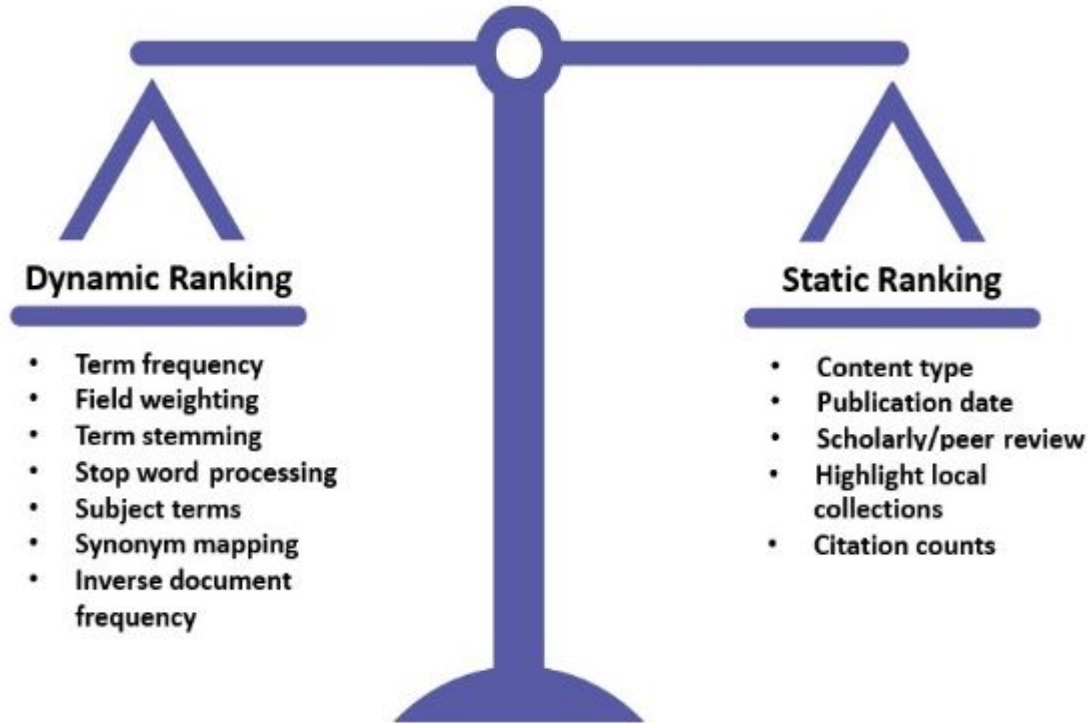

## DOI Match Rule

# Summon Relevance Ranking

# Pros & Cons for Both

- With great power comes great responsibility  
(=internal support burden AKA the app won't love you back...)
- Local indexes provide a lot of institutional customization, but also won't dedup with remotely held records (Summon only has one index)
- Oh the tweaking, tweaking, tweaking....
- ILS/patron fulfillment easier to do across institutions/consortia in Primo
- If one university solves an issue in Primo, the community may not find out about their local customization (Primo Apps to the rescue!), in Summon, everybody wins
- Improvements to metadata are on someone else's schedule (summon)
- Consortium views of holdings much harder to do in Summon

# Question 4

To what degree can the interface be customised?

# New School Customization

# U of G: Simple Customisations

The screenshot shows the University of Guelph Library website. At the top left is the University of Guelph logo and the text "LIBR@RY". In the top right corner, it says "Guest" and "e-Shelf". Below the logo, there are navigation links: "Tags", "Databases", "e-Journals", "Course Reserves", "Racer", "TRELLIS", and "Search Tips". A search bar is located below these links, with "Search" in the left corner and "Books +", "Articles +" in the middle. An orange "Search" button is on the right. Below the search bar, there are links for "New Search", "Advanced Search", and "Browse Search". Below the search bar, there is a text input field containing the Boolean search example: "e.g., king AND shakespeare NOT lear". Below the search bar, there are two main sections. The left section is titled "Welcome to Primo with Primo Central!" and contains the text "What is Primo Central?" and "Primo Central is an index that provides credible, relevance ranked results from many of the Library's online and print collections in a single search." The right section is titled "Library News & Events" and contains a link for "Friday and Saturday Extended Hours" with the text "Due to the Saturday April 14 closure and rescheduling of the exams: Friday April 20th and Saturday April 21st".

# U of G: Advanced Customisations

The screenshot shows a library catalog record for the book "Posh pancakes & fancy fritters" by Helen V. Fisher. The record includes fields for Title, Author, Subjects, Publisher, Language, Creation Date, Format, Identifier, and Notes. A custom "Links" menu is visible on the right side of the record, containing various options such as "Add to e-Shelf", "E-mail", "Print", "Permalink", "Citation", "EasyBib", "EndNote", "Mendeley", "Export RIS", "EndNote Web", "RefWorks UW", "Export BibTeX", "ARES - Book Chapter", and "ARES - Book". A red arrow points to the "ARES - Book" option in the menu.

Inject links to export to Ares to simplify staff/faculty course reading lists

# Advantages

- No customer server-side code running, customer device (phone, tablet, or desktop) is making calls to central primo app and then displaying customizations within the browser (saving time and processing power from cloud)
- Customers still able to build customizations and integrations with metadata provided by Primo
- Common development framework and platform makes code exchange between institutions easy...Yay! Primo Apps!

# Disadvantages

- Loss of root access to the server means no un-mediated database queries (security) or code running that takes lots of CPU cycles
- Loss of access to the filesystem means there is no code-level access to Primo, but higher requirements of APIs to provide info needed for apps (like configuration values, etc.)
- Documentation burden of the primo-explore environment is much higher because of the loss of access to source-code
- Increased security will not allow primo to speak to third-parties without some type of externally hosted mediator script (need way to store API keys securely)

# Customization is great but...

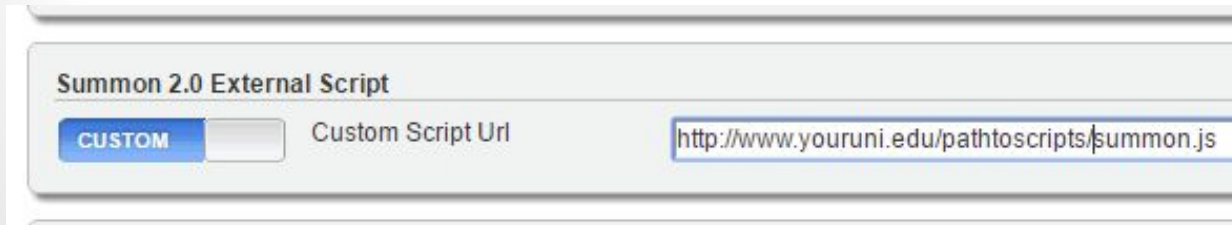

- Regression testing is required for each service pack
- Every customization slows performance
- Networked customization means your app's responsiveness is dependent on other networks, not just your own or the cloud.

# Summon Customization

- There's several branding aspects, and a few display aspects
- More advanced modifications have to happen via the "Custom Script URL" option in the Summon Admin console
- With a skilled developer, Summon can be modified fairly extensively
- But Summon's strength lies in the adage of: "Less is More"
- AngularJS update (Summer 2017) required recoding of some customizations

# Summon Customization with Jim @ Ball State

- Two paths to customize Summon
  - Summon API
    - Roll your own Summon UI
  - External Custom Script
    - Leverage Angular JS to insert code into native Summon UI
    - Call PHP, JQuery, override CSS and system messages

The screenshot shows a web interface for configuring the Summon 2.0 External Script. It features a title bar "Summon 2.0 External Script" and a "CUSTOM" button. Below the button is a text input field labeled "Custom Script Url" containing the URL "http://www.youruni.edu/pathtoscripts/summon.js".

## Programming Perl

"Programming Perl", best known as the Camel Book among programmers, is a book (ISBN 978-0-596-00492-7) and ebook (ISBN 978-1-4493-9890-3) about writing programs using the Perl programming language, revised as several editions (1991-2009) to reflect major language changes since Perl version 4. Editions have been co-written by the creator of Perl, Larry Wall, along with Randal L. Schwartz, then Tom Christiansen and then Jon Orwant. Published by O'Reilly, the book is considered the canonical reference work for Perl programmers. With over a thousand pages, the various editions contain complete descriptions of each Perl language version and its interpreter. Examples range from trivial code snippets to the highly complex expressions for which Perl is notorious. The camel book editions are also noted for being written in an approachable and humorous style.

- Alma: 11/2018

# Questions: Part 2

- How important is your local content vs. remote content?
- What do your patrons say about the product (usability)?
- What challenges or successes have you encountered on the public services front?
- What tools do you use to gather analytics, built-in, external or both?
- What benefits have you seen emerge as a result of primo and summon being under one roof?
- What are your experiences with the user community engagement, e.g., enhancements, collaboration

# Question 1

How important is your local content vs. your content delivered from elsewhere?

# Primo - Local Content First

e.g., king AND shakespeare NOT lear

# Summon

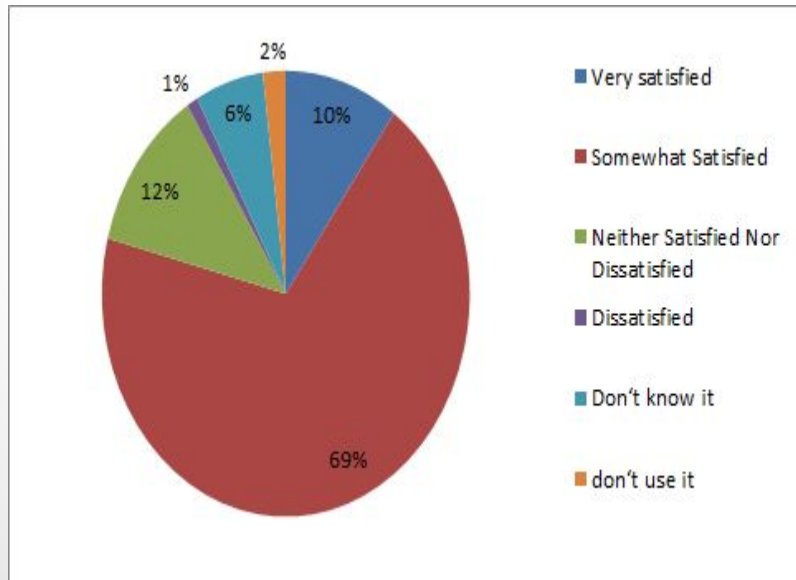

- Summon doesn't offer a way for customers to boost institutional records...but there is some built-in boosting through the algorithm
- Some boosting of key resources can be handled with Best Bets, Database Recommender and Topic Pane features of Summon
- Some institutions choose not to include their local holdings for various reasons: bento, very small index, etc.

# Question 2

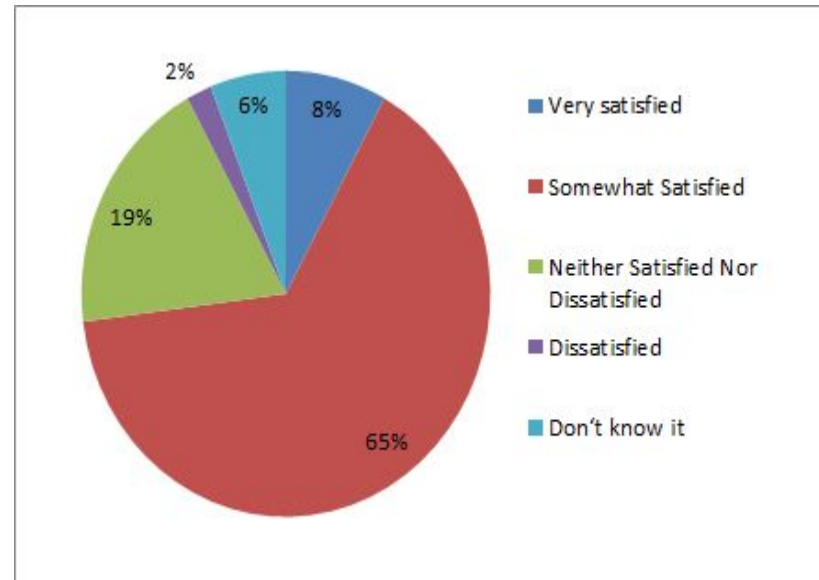

What do your patrons say about the product (usability)?

# Customer satisfaction Primo at Mannheim

2016

2012

# Primo UX Tests

<b>Primo Study (#1)</b>	W2010	<ul style="list-style-type: none"><li>▪ How do users navigate Primo?</li><li>▪ Do users interact with Primo's features like hold and recall, reviews and tags, my account, etc.?</li></ul>	<ul style="list-style-type: none"><li>▪ Usability testing</li></ul>	<ul style="list-style-type: none"><li>▪ Undergrad students</li><li>▪ Graduate students</li></ul>	<ul style="list-style-type: none"><li>▪ Users do not understand the scope of Primo searches, nor how Primo relates to other search options on the Library website, such as Scholars Portal, other journal indexes, and the e-journal A-Z list.</li><li>▪ Users are confused about most of Primo's features.</li><li>▪ They found Primo hard to use and "not user friendly"</li></ul>
-------------------------	-------	--	---	--	--

- Primo v3 interface
- Pre website redesign

# Primo UX Tests

<b>Primo Central Study (#2)</b>	F2011	<ul style="list-style-type: none"><li>How is Primo Central being received on campus?</li></ul>	<ul style="list-style-type: none"><li>Focus group</li><li>Usability testing</li></ul>	<ul style="list-style-type: none"><li>Library staff</li><li>Undergrad students</li><li>Graduate students</li></ul>	<ul style="list-style-type: none"><li>Communicating to staff about the basics of and changes to Primo Central was ineffective.</li><li>Users expressed confidence that Primo Central was working.</li><li>At times, Primo Central provided too much information and staff would revert to TRELIS or a Library-created web page in an effort to have more control over results.</li></ul>
---------------------------------	-------	--	---	--	--

- Primo v4 interface
- Post web redesign
- Users found it easy and intuitive; staff struggled

# Question 3

What challenges or successes have you encountered on the public services front?

# Primo Public Services

- Intuitive & easy to use; great place to start
- Worked with Ex Libris to get U of Guelph theses and dissertations (D-Space) loaded as a Primo Central resource
- Some 'blindspots' in Primo Central Index (Geography)
- Influences where we purchase online resources from

# Summon Public Services

- Students and most faculty got Summon right away; UX even better with Summon 2.0.
- Librarians took a while longer: hard to let go of Boolean searching, pre-search limiters in favor of relevancy and facets.
- Some librarians believe discovery is dumbing down the research experience, taking away from critical evaluation of sources
- Librarians have trouble trusting discovery results, as sometimes it's difficult to explain why Summon is doing what it's doing

# Question 3

What tools do you use to gather analytics, built-in, external or both?

# Primo Analytics

## Facet usage example

# Primo Usage

- Primo integrated analytics
- Google analytics\*

# Summon Analytics

- Usage reports are available through Summon Admin Console and Summon supports Google Analytics in order to track additional user activity not covered in Summon admin console reports.
- Summon reports are built with Oracle Business Intelligence (OBI).
- Summon analytics reports: action usage searches, device usage, facet usage, popular searches, session usage and zero result searches.

# Summon Analytics Example

# Question 4

What benefits have you seen emerge as a result of primo and summon being under one roof?

# Feature creep....

- Resource Recommender
- Topic API expansion within Primo
- Introduction of metadata into Summon Index first has led to cleanup of PCI article metadata and reduction of resource types

# Summon is loading many data sources now!

- Ball State librarians turned the corner around 2015.
- Inclusion of IR content is a given with Summon. Ball State loads both CONTENTdm and DSpace.

## Patron Enrichment!

- Addition of Alma Services Page to SOA is a major improvement

# Question 5

What are your experiences with the user community engagement, e.g., enhancements, collaboration?

(..if you want to bring people together...give 'em a common problem....)

# Primo Community

- Ex Libris support has always been really great
- The NERS process has been around for 10+ years
- Primo developers blog: <https://developers.exlibrisgroup.com/blog/tag/primo>
- Many ways to communicate with the user community
  - listserv
  - github
  - primo apps
  - slack
  - conferences
  - devday
  - youtube channel
  - summits
  - Ideas exchange

# Summon Community

- An ever evolving dialog between Ex Libris, the Summon Working Group and the Community - now 2 years old
- The introduction of the NERS process / commitment to enhancements within a certain timeframe
- Idea Exchange gives the larger community a voice which is factored into the enhancements process by the WG
- Sharing customizations is less formalized, but it happens
- An opportunity to participate in Regional User Groups
- This conference!
