Phytoplankton Collection Methodologies:

80 micron Plankton Tow Net with sample bottle attachment

## Phytoplankton Protocol:

1. Gather Samples
2. Make one slide per sample
3. View slides using microscope connected with computer
4. Record findings using “ Row # “ and “ Colum letter “
5. Record using “ Tally’s “ per species found within sample
6. Capture anything interesting “ take Picture “
7. Duplicate pictures taken
8. Make sure measurement of species found is taken
9. Email Jennifer Maucher at [Jennifer.maucher@noaa.gov](mailto:Jennifer.maucher@noaa.gov) , include pictures, questions and names of the species you “guess” you found.

**If requested by NOAA, Jennifer will ask for a water sample from our findings.**

## Harmful Algae Bloom Screening Data Entry

Navigate to <https://coastalscience.noaa.gov/research/stressor-impacts-mitigation/pmndata/submit-data-regions/> (using Google Chrome, it can be found on the bookmarks bar), and select [Atlantic Region 1](#).

Our PMN ID is [NY138](#) on the dropdown menu.
